

# U.S. ARMY ENGINEER RESEARCH and DEVELOPMENT CENTER DETERMINES POTENTIAL ENGINEERING BENEFITS OF

## Soil-Sement®

Dust and Erosion Control Agent

In a comprehensive study just released by the U.S. Army Research and Development Center of 12 non-traditional stabilizers and three traditional types, **SOIL-SEMENT®** (one of the non-traditional types) showed its potential to increase the UC strength of silty sand (SM) material under both “wet” **and** dry conditions.

The results verified that **SOIL-SEMENT®** polymer emulsion SIGNIFICANTLY improved the UC strength of the SM material (**58 percent in dry test conditions and 208 percent in wet conditions**). Except for cement and polymers, other traditional and non-traditional stabilizers provided no significant potential.

*SOIL-SEMENT® ...twenty-six years of experience and independent testing resulting in CERTIFIED reliability for dust control and stabilization!*
